PRODUCT INFORMATION

**PREP LUBE CONCENTRATE**

**Description**

A concentrated solution that is used to lubricate the substrate before applying vinyl films. It allows the applicator to accurately position the vinyl and enhances the adhesion of the vinyl. Ideal for glass installations. It can also be used to clean the substrate.

**Application**

Dilute the Prep Lube Concentrate with water (500 mls makes 4 litres of solution) and pour into a spray bottle. Clean the substrate with Prep Lube (diluted) or Prep Vinyl prior to the application of vinyl.

Spray the substrate and the adhesive side of the vinyl with Prep Lube and then position the vinyl onto the substrate. When accurately positioned use a squeegee to remove all the liquid between the substrate and the vinyl. Allow a few minutes before removing the application tape.

**Pack Size**

500 ml, 1 litre and 4 litre plastic bottles

**Caution**

Avoid contact with skin and eyes and avoid breathing the vapour of the concentrated solution.

Always check with your vinyl supplier that the vinyl is suitable for wet application
